Personality RadarSM

Market Intelligence Beyond Survey

Personality
RadarSM

answers + 2700
to your questions data points

AYTM has developed a unique market intelligence solution called PersonalityRadarSM. It gives you access to our evergrowing database of ~3000 traits that we profile our respondents by and keep up to date.

We analyze millions of data point combinations on the fly and present you a clear window into the statistically significant affinities between respondents' answers on your questions and their aggregated psychographic & personality traits.

You can discover, for example, that **Nintendo owners are 62.7%** more likely to be actively shopping for a **new vehicle in early 2014** or that **Republicans** were 21% more likely to root for **Broncos** in the last Super Bowl (XLVIII).

[Play with it here.](#)

You can uncover hundreds of data points that would be impossible to predict in any quantitative research environment otherwise. Allocate common personas by clustering their affinities in relationship to the brand/product/entity you're researching.

Very few brands can afford to ask their customers tricky personality questions, such as, "Do you see yourself rather lazy or hardworking?", Outgoing or Shy, Liberal or Conservative, yet actionable insights will make all the difference in success of a product launch, advertising campaign or a re-branding because you'd be able to appeal to their feelings.

Gone are the days when survey analysis was limited only to the "demographic buckets" such as age, gender, income, employment, etc. Now you can really get into the shoes and heads of your target market and the best news is that you don't have to do any Big Data heavy lifting or rely on inferred social media/browsing data.

Each eligible AYTM PanelSurvey comes with up to 10 relevant PersonalityRadarSM tags unlocked for free.

PERSONALITY RADAR HIGHLIGHTS

- Breakthrough User Interface
- ~3000 data points on top of your survey data
- Solid statistical analysis
- Actionable auto-predictions written out in English
- All personality and psychographic data is voluntarily self-reported
- All tags are presented in aggregate to protect respondents' privacy
- Raw numbers references
- Tags polarity & most/least relevant tags mode
- 99% -80% Confidence Level sensitivity setting
- Minimum & Maximum Tags IR controls
- Min number of respondents per tag setting
- Top Tags view modes
- Proportional Power/Sector separated view modes
- Jitter, Scale & Contrast View mode settings
- Individual Radar views for each sub question of matrix questions
- List View ranked by Tags Correlation to the answer choices
- List View ranked by Tags Popularity
- Robust filters by 24 categories:

Brand awareness	Home and Family	Politics & Religion
Digital life	Life Changes	Purchasing Habits
Food & Drinks	Media	Skills
Gadgets & Devices	Money Management	Sports
Games	Personal Care	Trait
